## SPECIAL ARTICULATED VACUUM CUP HOLDERS

The distinctive feature of these cup holders is their articulated joint in hardened steel, which allows the flat cups installed on these cup holders to adapt themselves to the loads to be lifted even if not completely parallel with the cup plane, as well as to compensate possible verticality errors that can arise between the cup holder and the automation fixing support.
Their technical and mechanical features are the same as the other previously described special vacuum cup holders.
The actual springing stroke is:
$\begin{array}{ll}\text { - For height } \mathrm{C}=55 \mathrm{~mm} & 37 \mathrm{~mm} \\ \text { - For height } \mathrm{C}=110 \mathrm{~mm} & 84 \mathrm{~mm}\end{array}$
